

## OLED & AMOLED Kits

### Densitron OLED & AMOLED Evaluation Kits

#### DUO OLED USB kit

Densitron have developed an easy to use yet powerful and versatile development and demonstration tool for driving our range of active and passive matrix OLED displays from the USB port of a PC. DUO is hot pluggable and does not require extra cables or power supply to run, allowing users to be up and running in minutes.

The kit consists of an OLED display with transition Board, USB controller card, mini USB cable and a CD with software application and drivers.

USB Controller Card is common for all the available DUO kits. Combination of different OLED displays with Transition boards are offered separately for existing DUO kit customer.

Kit Number	Size (inches)	Display Part Number	Interface	Controller Board	Transition Board	▲ Controller
