## SINGLE PHASE HALL EFFECT SWITCH

#### Description

AH337 is an unipolar Hall-Effect sensor for contactless switching applications. The device includes an on-chip Hall voltage generator for magnetic sensing, an amplifier that amplifies the Hall voltage, a Schmitt trigger to provide switching hysteresis for noise rejection, and an open-collector output. The band-gap regulator allows a wide operating voltage range.

When the magnetic flux density (**B**) is larger than operate point (**Bop**), output is switched on (OUT pin is pulled low). The output state is held on until a magnetic flux density falls below Brp. When **B** is less than Brp, the output is switched off.

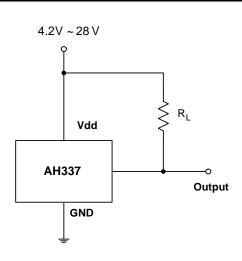

The AH337 is available in SIP-3L and SC59 packages.

#### Features

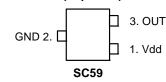

- Unipolar Hall-Effect sensor
- 4.2V to 28V DC operating voltage
