

Data Sheet Supplement Version 3.0 (valid for 8" product)

Dynamic Differential Hall Effect Sensor

TLE4928C

For all parameters not specified in this document the TLE4925/25C data sheet is valid.

1 TLE4928C

1.1 Operating Range

No.	Parameter	Symbol	min	typ	max	Unit	Remarks
1.1.1	Power on time	t _{on}			1	ms	Time to achieve
							specified accuracy
							After power on the
							output of the IC is
							always in high-state.
							After internal resets
							output is locked ¹ .

1.2 AC/DC Characteristics

Note: Not part of production testing, verified by design and characterization.

No.	Parameter	Symbol	min	typ	max	Unit	Remarks
1.2.1	Frequency range	f	0.006		8	kHz	Operation below 6Hz ²
1.2.2	Offset recalibration time after last output change	t _{reset}	165	195	225	ms	Valid for calibrated mode
							Output locked to state
							before recalibration

¹ Output of the IC is locked in present state (high-state or low-state) after an internal reset is launched. This reset happens typically every 195ms when there is no output switching in either case. See also 1.2.2. A voltage reset causes a release of the output and output is in high state after power on again. ² output will switch if magnetic signal is changing more that $2x |\Delta B_{min}|$ within offset recalibration time even below 6Hz once per magnetic edge, increased phase error is possible

Revision History:		April 2007	Version 3.0		
Previous Ve	ersion: 2.0
