

SN75154 QUADRUPLE LINE RECEIVER

SLLS083B – NOVEMBER 1970 – REVISED MAY 1995

- Meets or Exceeds the Requirements of ANSI Standard EIA/TIA-232-E and ITU Recommendation V.28
- Input Resistance . . . 3 k Ω to 7 k Ω Over Full EIA/TIA-232-E Voltage Range
- Input Threshold Adjustable to Meet Fail-Safe Requirements Without Using External Components
- Built-In Hysteresis for Increased Noise Immunity
- Inverting Output Compatible With TTL
- Output With Active Pullup for Symmetrical Switching Speeds
- Standard Supply Voltages . . . 5 V or 12 V

D OR N PACKAGE
(TOP VIEW)

† For function of R1, see schematic

description

The SN75154 is a monolithic low-power Schottky line receiver designed to satisfy the requirements of the standard interface between data terminal equipment and data communication equipment as defined by ANSI Standard EIA/TIA-232-E. Other applications are for relatively short, single-line, point-to-point data transmission and for level translators. Operation is normally from a single 5-V supply; however, a built-in option allows operation from a 12-V supply without the use of additional components. The output is compatible with most TTL circuits when either supply voltage is used.

In normal operation, the threshold-control terminals are connected to the V_{CC1} terminal, even if power is being supplied via the alternate V_{CC2} terminal. This provides a wide hysteresis loop, which is the difference between the positive-going and negative-going threshold voltages. See typical characteristics. In this mode of operation, if the input voltage goes to zero, the output voltage will remain at the low or high level as determined by the previous input.

For fail-safe operation, the threshold-control terminals are open. This reduces the hysteresis loop by causing the negative-going threshold voltage to be above zero. The positive-going threshold voltage remains above zero as it is unaffected by the disposition of the threshold terminals. In the fail-safe mode, if the input voltage goes to zero or an open-circuit condition, the output will go to the high level regardless of the previous input condition.

The SN75154 is characterized for operation from 0°C to 70°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SN75154 QUADRUPLE LINE RECEIVER

SLLS083B – NOVEMBER 1970 – REVISED MAY 1995

logic symbol†

logic diagram (positive logic)

† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

schematic

‡ When V_{CC1} is used, V_{CC2} may be left open or shorted to V_{CC1} . When V_{CC2} is used, V_{CC1} must be left open or connected to the threshold control pins.

SN75154 QUADRUPLE LINE RECEIVER

SLLS083B – NOVEMBER 1970 – REVISED MAY 1995

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Normal supply voltage, V_{CC1} (see Note 1)	7 V
Alternate supply voltage, V_{CC2}	14 V
Input voltage, V_I	± 25 V
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, T_A	0°C to 70°C
Storage temperature range, T_{stg}	-65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: Voltage values are with respect to network GND terminal.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING
D	950 mW	7.6 mW/ $^\circ\text{C}$	608 mW
N	1150 mW	9.2 mW/ $^\circ\text{C}$	736 mW
NS	625 mW	5.0 mW/ $^\circ\text{C}$	400 mW

recommended operating conditions

	MIN	NOM	MAX	UNIT
Normal supply voltage, V_{CC1}	4.5	5	5.5	V
Alternate supply voltage, V_{CC2}	10.8	12	13.2	V
High-level input voltage, V_{IH} (see Note 2)	3		15	V
Low-level input voltage, V_{IL} (see Note 2)	-15		-3	V
High-level output current, I_{OH}			-400	μA
Low-level output current, I_{OL}			16	mA
Operating free-air temperature, T_A	0		70	$^\circ\text{C}$

NOTE 2: The algebraic convention, where the less positive (more negative) limit is designated as minimum, is used in this data sheet for logic and threshold levels only, e.g., when 0 V is the maximum, the minimum limit is a more negative voltage.

SN75154 QUADRUPLE LINE RECEIVER

SLLS083B – NOVEMBER 1970 – REVISED MAY 1995

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST FIGURE	TEST CONDITIONS	MIN	TYP†	MAX	UNIT
V _{IT+}	Positive-going input threshold voltage	1	Normal operation	0.8	2.2	3	V
			Fail-safe operation	0.8	2.2	3	
V _{IT-}	Negative-going input threshold voltage	1	Normal operation	-3	-1.1	0	V
			Fail-safe operation	0.8	1.4	3	
V _{hys}	Hysteresis voltage (V _{IT+} - V _{IT-})	1	Normal operation	0.8	3.3	6	V
			Fail-safe operation	0	0.8	2.2	
V _{OH}	High-level output voltage	1	I _{OH} = -400 μA	2.4	3.5		V
V _{OL}	Low-level output voltage	1	I _{OL} = 16 mA		0.29	0.4	V
r _i	Input resistance	2	ΔV _I = -25 V to -14 V	3	5	7	kΩ
			ΔV _I = -14 V to -3 V	3	5	7	
			ΔV _I = -3 V to 3 V	3	6	8	
			ΔV _I = 3 V to 14 V	3	5	7	
			ΔV _I = 14 V to 25 V	3	5	7	
V _{I(open)}	Open-circuit input voltage	3	I _I = 0	0	0.2	2	V
I _{OS}	Short-circuit output current‡	4	V _{CC1} = 5.5 V, V _I = -5 V	-10	-20	-40	mA
I _{CC1}	Supply current from V _{CC1}	5	V _{CC1} = 5.5 V, T _A = 25°C		20	35	mA
I _{CC2}	Supply current from V _{CC2}		V _{CC2} = 13.2 V, T _A = 25°C		23	40	

† All typical values are at V_{CC1} = 5 V, T_A = 25°C.

‡ Not more than one output should be shorted at a time.

switching characteristics, V_{CC1} = 5 V, T_A = 25°C, N = 10

PARAMETER		TEST FIGURE	TEST CONDITIONS	MIN	TYP	MAX	UNIT
t _{PLH}	Propagation delay time, low- to high-level output	6	C _L = 50 pF, R _L = 390 Ω		11		ns
t _{PHL}	Propagation delay time, high- to low-level output				8		ns
t _{TLH}	Transition time, low- to high-level output				7		ns
t _{THL}	Transition time, high- to low-level output				2.2		ns

TYPICAL CHARACTERISTICS

NOTE A: For normal operation, the threshold controls are connected to V_{CC1} . For fail-safe operation, the threshold controls are open.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - May not be currently available - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

None: Not yet available Lead (Pb-Free).

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean "Pb-Free" and in addition, uses package materials that do not contain halogens, including bromine (Br) or antimony (Sb) above 0.1% of total product weight.

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
