

NEW! AN488xx Hall IC Series

Surface Mount, Hall Effect Latches, Magnetic Digital-Position Sensor IC's For Rotation and Open/Close Detection Applications, 1.8V Low Current Consumption

Panasonic, a worldwide leader in Semiconductor Products, introduces the **NEW AN488xx Hall IC Series**. The **NEW AN488xx Series** parts act as a contactless switch using a pulse system that detects a magnetic field which turns devices on and off. The **AN48846B** and **AN48841B** parts are suitable for Wheel Keys and Track Ball applications; they detect a magnetic field's polarity change from south to north or from north to south. The **AN48836B** part is suitable for magnetic open/close switch applications and can detect the magnetic fields of both the south and north poles without regard to magnetic polarity

Features:

- Power Supply Voltage:
 - AN48846B and AN48836B: 1.65V to 3.6V
 - AN48841B: 2.5V to 5.25V
- Intermittent Operation Allows Low-Power Consumption
- Choose AN48836B For Bidirectional Detection
- Package: SMINI-5DE, 2.0 x 2.0 x 0.7mm
- RoHS Directive Compliant

Benefits:

- High-Sensitivity, Low-Cost Magnet
- Long Life
- Low Power Consumption
- Easy To Use

Industries:

- Handheld Electronics
- Consumer Electronics
- Industrial
- Medical
- Security
- Alternative Energy
- White Goods

Applications:

- On/Off Control
- Rotation Detection
- Open/Close Position Detection

Part Number Information:
