in SOT-23*

Literature Number: SNVS001D

LP2980-ADJ

Micropower 50 mA Ultra Low-Dropout Adjustable Voltage Regulator in SOT-23

General Description

The LP2980-ADJ is a 50 mA adjustable voltage regulator designed to provide ultra low dropout in battery powered applications.

Using an optimized VIP® (vertically Integrated PNP) process, the LP2980-ADJ delivers unequalled performance in all specifications critical to battery-powered designs:

Adjustable Output: output voltage can be set from 1.23V to 15V.

Precision Reference: 1.0% tolerance.

Dropout Voltage: typically 120 mV @ 50 mA load, and 7 mV @ 1 mA load.

Ground Pin Current: typically 320 μ A @ 50 mA load, and 80 μ A @ 1 mA load.

Sleep Mode: less than 1 μ A quiescent current when on/off pin is pulled low.

Smallest Possible Size: SOT-23 package uses minimum board space.

Features

- Ultra low dropout voltage
- Output adjusts from 1.23V to 15V
- Guaranteed 50 mA output current
- Uses tiny SOT-23 package
- Requires few external components
- <1 μ A quiescent current when shutdown
- Low ground pin current at all loads
- High peak current capability (150 mA typical)
- Wide supply voltage range (2.5V–16V)
- Overtemperature/overcurrent protection
- -40°C to +125°C Junction temperature range

Applications

- Cellular Phone
- Palmtop/Laptop Computer
- Camcorder, Personal Stereo, Camera

Pin Descriptions

Name	Pin Number	Function
V_{IN}	1	Input Voltage
GND	2	Common Ground (device substrate)
ON/OFF	3	Logic high enable pin
ADJ	4	Output voltage feedback pin
V_{OUT}	5	Regulated output voltage

Ordering Information

TABLE 1. Package Marking and Ordering Information

Grade	Order Information	Package Marking	Supplied as
STD	LP2980IM5X-ADJ	L06B	3000 Units on Tape and Reel
	LP2980IM5-ADJ	L06B	1000 Units on Tape and Reel

For fixed output voltage versions, see LP2980 and LP2980LV datasheets.

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature Range	-65 to +150°C
Operating Junction Temperature Range	-40 to +125°C
Lead Temp. (Soldering, 5 seconds)	260°C
ESD Rating (Note 2)	2 kV

Power Dissipation (Note 3)

Input Supply Voltage (Survival)	-0.3V to +16V
Input Supply Voltage (Operating)	2.5V to +16V
Shutdown Input Voltage (Survival)	-0.3V to +16V
Output Voltage (Survival) (Note 4)	-0.3V to 16V
I _{OUT} (Survival)	Short Circuit Protected
Input-Output Voltage (Survival) (Note 5)	-0.3V to 16V

Internally Limited

Electrical Characteristics

Limits in standard typeface are for T_J = 25°C, and limits in **boldface type** apply over the full operating temperature range. Unless otherwise specified: V_{IN} = 4.3V, V_{OUT} = 3.3V, I_L = 1 mA, C_{IN} = 1 μF, C_{OUT} = 2.2 μF, V_{ON/OFF} = 2V.

Symbol	Parameter	Conditions	Typ	LP2980I-ADJ (Note 6)		Units
				Min	Max	
V _{REF}	Reference Voltage		1.225	1.213	1.237	V
		1 mA < I _L < 50 mA V _{OUT} + 1 ≤ V _{IN} ≤ 16V	1.225	1.206	1.243	
				1.182	1.268	
$\frac{\Delta V_{REF}}{\Delta V_{IN}}$	Reference Voltage Line Regulation	2.5V ≤ V _{IN} ≤ 16V	3		6.0 15.0	mV
V _{IN} -V _O	Dropout Voltage (Note 7)	I _L = 0	1		3 5	mV
		I _L = 1 mA	7		10 15	
		I _L = 10 mA	40		60 90	
		I _L = 50 mA	120		150 225	
I _{GND}	Ground Pin Current	I _L = 0	60		95 125	μA
		I _L = 1 mA	80		110 170	
		I _L = 10 mA	120		220 460	
		I _L = 50 mA	320		600 1200	
		V _{ON/OFF} < 0.18V	0.01		1	
I _{ADJ}	ADJ Pin Bias Current	1 mA ≤ I _L ≤ 50 mA	150		350	nA
V _{ON/OFF}	ON/OFF Input Voltage (Note 8)	High = O/P ON	1.4	1.6		V
		Low = O/P OFF	0.55		0.18	
I _{ON/OFF}	ON/OFF Input Current	V _{ON/OFF} = 0	0.01		-1	μA
		V _{ON/OFF} = 5V	5		15	
I _{O(PK)}	Peak Output Current	V _{OUT} ≥ V _{O(NOM)} - 5%	150	100		mA
e _n	Output Noise Voltage (RMS)	BW = 300 Hz to 50 kHz, C _{OUT} = 10 μF	160			μV
$\frac{\Delta V_{OUT}}{\Delta V_{IN}}$	Ripple Rejection	f = 1 kHz C _{OUT} = 10 μF	68			dB
I _{O(MAX)}	Short Circuit Current	R _L = 0 (Steady State) (Note 9)	150			mA

Note 1: Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its rated operating conditions.

Note 2: The ESD rating of pins 3 and 4 is 1 kV.

Note 3: The maximum allowable power dissipation is a function of the maximum junction temperature, $T_J(\text{MAX})$, the junction-to-ambient thermal resistance, θ_{J-A} , and the ambient temperature, T_A . The maximum allowable power dissipation at any ambient temperature is calculated using:

$$P(\text{MAX}) = \frac{T_J(\text{MAX}) - T_A}{\theta_{J-A}}$$

The value of θ_{J-A} for the SOT-23 package is 300°C/W. Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown.

Note 4: If used in a dual-supply system where the regulator load is returned to a negative supply, the LP2980-ADJ output must be diode-clamped to ground.

Note 5: The output PNP structure contains a diode between the V_{IN} and V_{OUT} terminals that is normally reverse-biased. Reversing the polarity from V_{IN} to V_{OUT} will turn on this diode (see Application Hints).

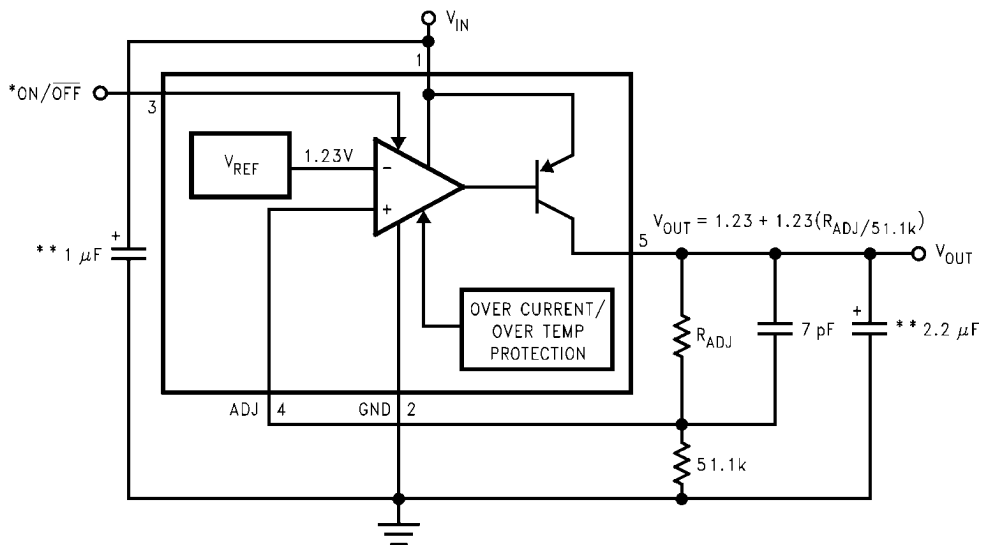

Note 6: Limits are 100% production tested at 25°C. Limits over the operating temperature range are guaranteed through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate National's Average Outgoing Quality Level (AOQL).

Note 7: Dropout voltage is defined as the input to output differential at which the output voltage drops 100 mV below the value measured with a 1V differential.

Note 8: The ON/OFF input must be properly driven to prevent possible misoperation. For details, refer to Application Hints.

Note 9: See Typical Performance Characteristics curves.

Typical Application Circuit

10000103

*ON/OFF INPUT MUST BE ACTIVELY TERMINATED. TIE TO V_{IN} IF THIS FUNCTION IS NOT TO BE USED.

**MINIMUM CAPACITANCE IS SHOWN TO ENSURE STABILITY OVER FULL LOAD CURRENT RANGE (SEE APPLICATION HINTS).

Typical Performance Characteristics Unless otherwise specified: $T_A = 25^\circ\text{C}$, $V_{IN} = V_O(\text{NOM}) + 1\text{V}$, $I_L = 1\text{ mA}$, ON/OFF pin tied to V_{IN} , $R_{\text{ADJ}} = 86.6\text{k}$, and test circuit is as shown in Basic Application Circuit.

Application Hints

EXTERNAL CAPACITORS

Like any low-dropout regulator, the external capacitors must be selected carefully to assure regulator loop stability.

INPUT CAPACITOR: An input capacitor whose value is $\geq 1 \mu\text{F}$ is *required* (the amount of capacitance may be increased without limit).

Any good quality Tantalum or Ceramic capacitor may be used here. The capacitor must be located not more than 0.5 from the input pin and returned to a clean analog ground.

OUTPUT CAPACITOR: The output capacitor must meet both the requirement for minimum amount of capacitance and E.S.R. (Equivalent Series Resistance) for stable operation.

Curves are provided below which show the allowable ESR of the output capacitor as a function of load current for both $2.2 \mu\text{F}$ and $4.7 \mu\text{F}$. A solid Tantalum capacitor is the best choice for the output.

FIGURE 1. 2.2 μF ESR Curves

FIGURE 2. 4.7 μF ESR Curves

IMPORTANT: The output capacitor must maintain its ESR in the stable region *over the full operating temperature range* to assure stability. Also, capacitor tolerance and variation with temperature must be considered to assure the minimum amount of capacitance is provided at all times.

Note that this capacitor must be located not more than 0.5" from the output pin and returned to a clean analog ground.

FEED-FORWARD CAPACITOR: A 7 pF feed-forward capacitor is required (see Basic Application Circuit). The function of this capacitor is to provide the lead compensation necessary for loop stability.

A temperature-stable ceramic capacitor (type NPO or COG) should be used here.

CAPACITOR CHARACTERISTICS

TANTALUM: The best capacitor choice for the LP2980-ADJ output is solid Tantalum. The ESR of a good quality Tantalum is almost perfectly centered in the middle of the "stable" range of the ESR curve (about 0.5Ω – 1Ω).

The temperature stability of Tantalums is typically very good, with a total variation of only about 2:1 over the temperature range of -40°C to $+125^\circ\text{C}$ (ESR increases at colder temperatures).

Off-brand capacitors should be avoided, as some poor quality Tantalums are seen with ESR's $> 10\Omega$, and this usually causes oscillation problems.

One caution about Tantalums if they are used on the input: the ESR of a Tantalum is low enough that it can be destroyed by surge current if powered up from a low impedance source (like a battery) that has no limit on inrush current. In these cases, use a ceramic input capacitor which does not have this problem.

CERAMIC: Ceramics are generally larger and more costly than Tantalums for a given amount of capacitance. Also, they have a very low ESR which is quite stable with temperature.

Be warned that the ESR of a ceramic capacitor is typically low enough to make an LDO oscillate: a $2.2 \mu\text{F}$ ceramic demonstrated an ESR of about $15 \text{ m}\Omega$ when tested. If used as an output capacitor, this will cause instability (see ESR Curves).

If a ceramic is used on the output of an LDO, a small resistance (about 1Ω) should be placed in series with the capacitor. If it is used as an input capacitor, no resistor is needed as there is no requirement for ESR on capacitors used on the input.

EXTERNAL RESISTORS

The output voltage is set using two external resistors (see Basic Application Circuit). It is recommended that the resistor from the ADJ pin to ground be $51.1 \text{ k}\Omega$.

The other resistor (R_{ADJ}) which connects between V_{OUT} and the ADJ pin is selected to set V_{OUT} as given by the formula:

$$V_{\text{OUT}} = V_{\text{REF}} + (V_{\text{REF}} \times (R_{\text{ADJ}} / 51.1 \text{ k}\Omega))$$

REVERSE CURRENT PATH

The PNP power transistor used as the pass element in the LP2980-ADJ has an inherent diode connected between the regulator output and input. During normal operation (where the input voltage is higher than the output) this diode is reverse biased (See Figure 3).

FIGURE 3. LP2980-ADJ Reverse Current Path

However, if the input voltage is more than a V_{BE} below the output voltage, this diode will turn ON and current will flow into the regulator output. In such cases, a parasitic SCR can latch which will allow a high current to flow into the V_{IN} pin and out the ground pin, which can damage the part.

The internal diode can also be turned on if the input voltage is abruptly stepped down to a voltage which is a V_{BE} below the output voltage.

In any application where the output may be pulled above the input, an external Schottky diode must be connected from V_{IN} to V_{OUT} (cathode on V_{IN} , anode on V_{OUT} . See Figure 4), to limit the reverse voltage across the LP2980-ADJ to 0.3V (see Absolute Maximum Ratings).

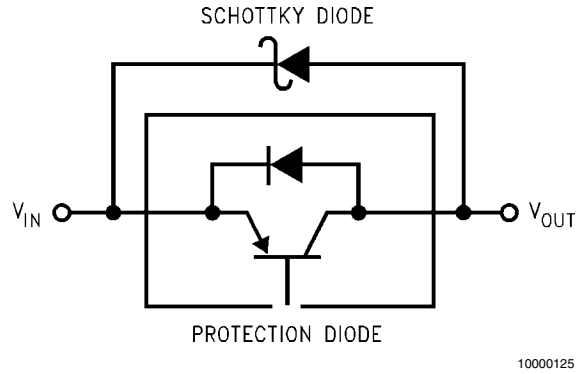

FIGURE 4. Adding External Schottky Diode Protection

ON/OFF INPUT OPERATION

The LP2980-ADJ is shut off by driving the ON/OFF input low, and turned on by pulling the ON/OFF input high. If this feature is not to be used, the ON/OFF input must be tied to V_{IN} to keep the regulator output on at all times (the ON/OFF input must not be left floating).

To ensure proper operation, the signal source used to drive the ON/OFF input must be able to swing above and below the specified turn-on/turn-off voltage thresholds which guarantee an ON or OFF state (see Electrical Characteristics).

It is also important that the turn-on (and turn-off) voltage signals applied to the ON/OFF input have a slew rate which is greater than 40 mV/ μ s.

IMPORTANT: The ON/OFF function will not operate correctly if a slow-moving signal is used to drive the ON/OFF input.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE CHIEF EXECUTIVE OFFICER AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
