The LED blinks at 0.5Hz rate when searching. During TX, the LED blinks at 500Hz. Otherwise, it is off.

An onboard blue LED is driven by the WLAN IC through a 1K resistor. High voltage turns the LED on. The LED pin is connected between the LED and the resistor and is about 2.8V when the LED is on. An external LED may be connected between the LED pin and GND with current limited by the 1K resistor. For more than about 1mA of LED current, a transistor or logic gate will be needed to drive the LED.
