Safety Information

⚠Warning

A Warning identifies conditions and actions that pose hazards to the user. To avoid electrical shock or personal injury, follow these guidelines:

- **Before using the thermometer inspect the case. Do not use the thermometer if it appears damaged. Look for cracks or missing plastic. Pay particular attention to the insulation around the connectors.**
- **Disconnect the thermocouple(s) from the thermometer before opening the case.**
- **Replace the batteries as soon as the battery indicator (▮) appears. The possibility of false readings can lead to personal injury.**
- **Do not use the thermometer if it operates abnormally. Protection may be impaired. When in doubt, have the thermometer serviced.**
- **Do not operate the thermometer around explosive gas, vapor, or dust.**
- **Reflective objects result in lower than actual temperature measurements. These objects pose a burn hazard.**
- **Do not connect to voltages >30 V ac rms, 42 V pk, 60 V dc from earth ground.**

⚠Warning (cont.)

- ***Models 52 and 54:*** **Measurement errors may occur if voltages on the measurement surfaces result in potentials greater than 1 V between the two thermocouples. When potential differences are anticipated between the thermocouples, use electrically insulated thermocouples.**
- **When servicing the thermometer, use only specified replacement parts.**
- **Do not use the thermometer with any part of the case or cover removed.**

Caution

To avoid damaging the thermometer or the equipment under test.

- **Use the proper thermocouples, function, and range for your thermometer.**
- **Do not attempt to recharge the batteries.**
- **Do not throw batteries into a fire to prevent explosion.**
- **Follow local laws or regulations when disposing batteries.**
- **Match the + and – polarities of the battery with the battery case.**
