**Vectorbord® Prototyping Boards** with punched holes are **convenient, economical** tools for assembling circuit components-and **cost efficien**t alternatives to custom designs. Available in several hole patterns for a **full range of design needs,** circuit speeds, component types and density. May be copper clad on one side. A **complete line of accessory products** also available, including eyelets, push-in (solderable or solderless), Wire-Wrap and screw machine terminals for all Vectorbord® Prototyping Boards.

Voltage/Ground Plane Pattern

- Overall voltage and ground planes on opposite board sides
- Isolated copper plated thru holes with insulating ring
- Can be committed to either voltage or ground plane with solder washers (T124)
 Good for Vcc & Gnd distribution & noise immunity

Zig-Zag Buses

- Pattern on one side alternates holes with opposite side bus (See illustration)
- 3-hole pads provide holes for DIP's
- 0.3" wide DIP's span buses and are soldered + pads
- Accepts wire-wrap or solder terminals in Zig-Zag bus

## Interleaved Bus Pattern

- Two independent copper buses that run the full width of board
- 0.3" DIPs span buses
- All copper buses are solder plated
- Accepts solder or wire-wrap terminals (see Parts & Accessories Section)

Pad-Per-Hole and Pad-Per- Hole and Ground Plane Patterns

- Isolated solder pads around all holes for mounting of DIP's and other components
- Solder plated pad and bus sur faces
- General purpose and bus specific applications
- Wire-wrap socket pins and connectors available separately

Universal & Peripheral Bus Pattern 02

- Voltage and Ground bus lines trace a path around board perimeter
- Some boards have back to back peripheral buses
- Unrestricted pattern inside of buses (No copper geometry)

3-Hole Solder Pad Pattern

- Voltage and ground buses interleaved between pad areas
- Sockets (DIP) and components mount over bus lines for maximum component capacity
- Pattern provides for convenient soldered jumper wire connections to component leads or sockets

Board Dimensions

All board dims are Height x Width
